

**Transcript: “Careers at the OIG: Data Analytics,” March 2019**

My name is Betsy Heines and I am a Mathematical Statistician in the Office of Data Analytics. The Office of Data Analytics is pretty new, so every day presents an opportunity to grow and build. Our projects utilize data that span the Department of Justice and we use advanced statistical software to help us analyze and visualize them, such as SAS, Tableau, Esri and Informatica. It’s cool because I get to help shape office culture and operations and the direction of our research and analytics. We have opportunities to work both independently and collaboratively, and we’ve got a great team supporting us both inside and outside of the Office of Data Analytics. My work is incredibly meaningful. I never thought I’d get to use my math degree to ensure accountability and justice for the American people. I’ve grown so much in my first year here, I can’t wait to see where the Office of Data Analytics goes in the future.
